

Sentry Defender

Installation Requirements

Westtek's Security Everywhere service monitors your workstation's behaviour via a lightweight software application that is compatible with all the latest operating systems.

Installation is quick and easy using the installation file we provide. There is one main requirement to ensure your installation is successful:

Your operating system **MUST** have all the updates installed!

(Installing the updates should be part of your cyber security routine anyway)

The technical bit...

Supported Operating Systems:	
Windows	10, 8.1, 8
Mac OS	10.15 (Catalina), 10.14 (Mojave), 10.13 (High Sierra)

Please Note:

Mac OS 10.10, 10.11 and 10.12 are NOT supported by Apple anymore, so are not compatible with Security Everywhere.

Windows 7 became EoL (end of life) on 14th January 2020, and so is not compatible with Security Everywhere. For more info please see:

<https://www.microsoft.com/en-us/microsoft-365/windows/end-of-windows-7-support>

Unsupported operating systems do not get security updates to patch newly discovered vulnerabilities.

Security Everywhere recommends upgrading the OS to a supported version as soon as possible.

Minimum Hardware Requirements

- 1 GHz CPU or better (dual core recommended)
- 2 GB RAM or more as per operating system requirements
- 1 GB free disk space
